What's Inside?

Codenotes for Java: Intermediate and Advanced Language Features covers a wide range of topics, including:

- **Generics:** Generics allow you to create code that can work with different types of data without having to rewrite the code for each type. This can make your code more flexible and reusable.
- **Annotations:** Annotations are a way to add metadata to your code. This metadata can be used by tools such as compilers and IDEs to provide additional information about your code.
- **Reflection:** Reflection allows you to inspect and modify the structure of your code at runtime. This can be useful for debugging, testing, and creating dynamic applications.
- **Concurrency:** Concurrency allows you to write code that can run multiple tasks simultaneously. This can improve the performance of your applications, especially on multicore processors.
- **Lambdas:** Lambdas are a type of anonymous function that can be used to write concise and expressive code. Lambdas can be used in a

variety of contexts, including as arguments to methods and as part of data structures.
