### By Dr. David Murray

The Collision of Epidemiology With Political Correctness is a groundbreaking book that examines the intersection of these two powerful forces. Author Dr. David Murray explores the ways in which political correctness can silence scientific inquiry, distort public health policy, and endanger the public's health.

In recent years, political correctness has become increasingly pervasive in our society. This has led to a climate of fear and self-censorship, in which people are afraid to speak their minds for fear of being labeled as racist, sexist, or homophobic. This climate has had a chilling effect on scientific inquiry, as researchers are now hesitant to pursue research that might be deemed politically incorrect.

The collision of epidemiology with political correctness is particularly dangerous because it can lead to the suppression of important public

health information. For example, in the early days of the AIDS epidemic, public health officials were reluctant to acknowledge that the disease was primarily spread through homosexual contact. This delay in acknowledging the truth cost lives.

Today, we are seeing a similar pattern with the obesity epidemic. Public health officials are reluctant to acknowledge the role of personal responsibility in obesity. Instead, they focus on blaming factors such as poverty and genetics. This is a dangerous approach, as it lets individuals off the hook for their own unhealthy choices.

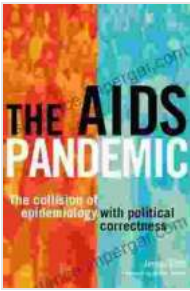

The Collision of Epidemiology With Political Correctness is a must-read for public health professionals, policymakers, and anyone concerned about the future of public health. Dr. Murray provides a clear and concise analysis of the problem, and he offers practical solutions for overcoming it.

### **About the Author**

Dr. David Murray is a professor of epidemiology at the University of Pittsburgh. He is a leading expert on the intersection of epidemiology and political correctness. Dr. Murray has published numerous articles on this topic, and he has testified before Congress on the dangers of political correctness in public health.
